# FREJA eID RELEASE NOTES

---

These Release Notes describe all the changes made to the Freja eID systems from the previous release. They include:

- Changes to the Freja eID IdP

## Summary

- [Freja eID IdP Update](#) – The IdP has been updated according to the latest Sweden Connect specifications, bringing more security for sign transactions.

## Freja eID IdP Update

The IdP has been upgraded according to the latest specification from Sweden Connect concerning authentication for signatures (found [here](#)).

The authentication context URI for sign (<http://id.elegnamnden.se/loa/1.0/1oa3-sigmessage>) is deprecated. Now, the SAML response that Freja eID IdP returns will include a new attribute called *signMessageDigest* when successful authentication for a sign transaction is completed.

By including the *signMessageDigest* attribute in the SAML assertion, the Freja eID IDP asserts that it has successfully displayed the sign message received in the request for the user and that the user has accepted to sign under the context of this sign message.
