FREJA eID RELEASE NOTES

These Release Notes describe all the changes made to the Freja eID systems from the previous release. They include:

- Updates to the Freja eID mobile application from version 6.2 to 6.3..

Summary

- Animations for Document Scanning – We have added animations to the Freja eID app to help users understand how to scan their documents when adding them to Freja eID.
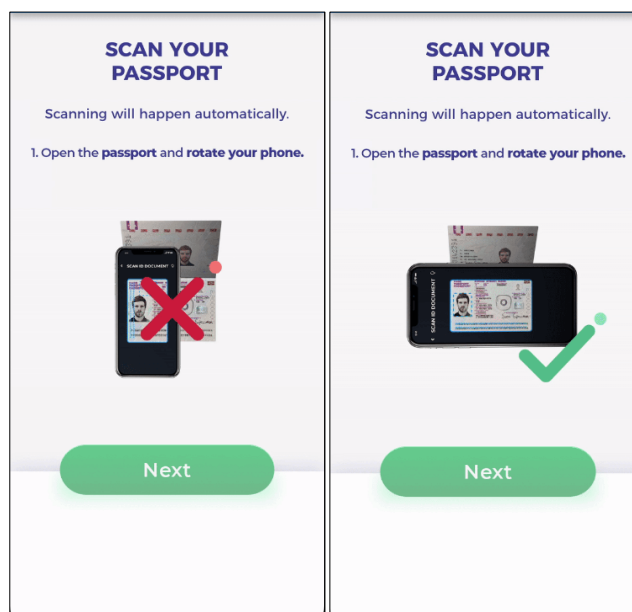

Animations for Document Scanning

Because adding a document to Freja eID is such an important step in creating a personal eID for users, we are constantly working on improving its user experience.

[Animations for Document Scanning](#)

We have replaced the current written instructions in the app with animations that explain to the user exactly what they need to do in order to add their document to Freja eID successfully. The most important things for people to understand is how to position their device and what part of the document to place in the camera frame so that all necessary data is captured.

After selecting the document they wish to add, an animation showing how to properly scan the document frame will play.

The animation will play as many times as people need it, and users can always go back to it to see it again.
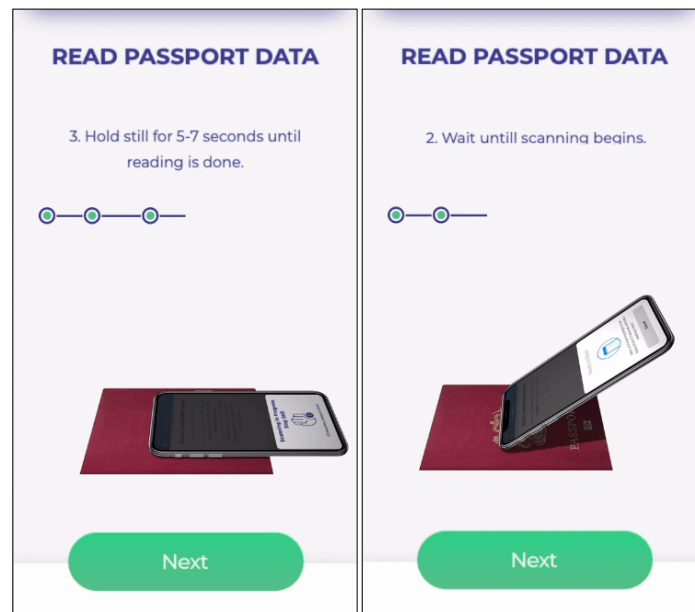

[Animations for Passport NFC Reading](#)

For users who have chosen the passport as their document, there is another step they need to perform in order to add it to Freja eID – NFC reading of the chip.

This is by far the safest method of adding a document to Freja eID. However,

it may be somewhat challenging for users who are not familiar with the concept. That is why we have added animations in this step to help users.

As there are differences in where NFC chips are placed on iOS and Android devices, there are separate animations showing users of both platforms the appropriate way to read the data from the passport via NFC. Pictured below Android on the left and iOS on the right.

As before, users may see the animation as many times as they need, and can go back to it whenever they like.
