# FREJA eID RELEASE NOTES

---

These Release Notes describe all the changes made to Freja eID systems from the previous release. They include:

- Updates to the Freja eID mobile application from version 6.16 to 6.17 on both Android and iOS.

## Summary

- LIVENESS CHECK INTRODUCED

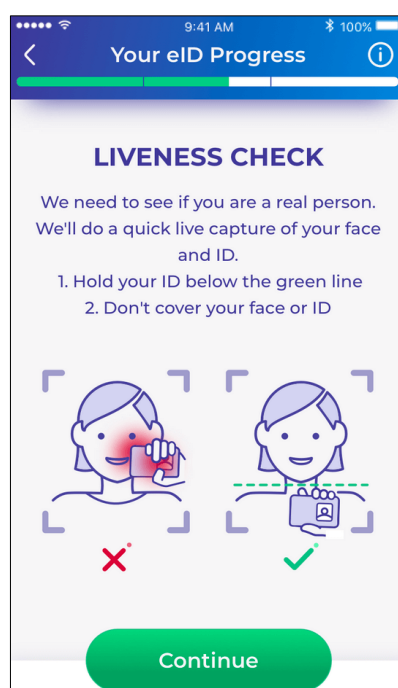

During ID document registration, we have added a separate step called the liveness check ('Aktivitetskontroll' in Swedish). This is a security measure to further ensure that the person creating the Freja eID is the same person as the one holding the document.

## Liveness check introduced

In order to further increase security when it comes to the registration process and the procurement of Freja eID, we have added a liveness check ('Aktivitetskontroll' in Swedish) during ID document registration.

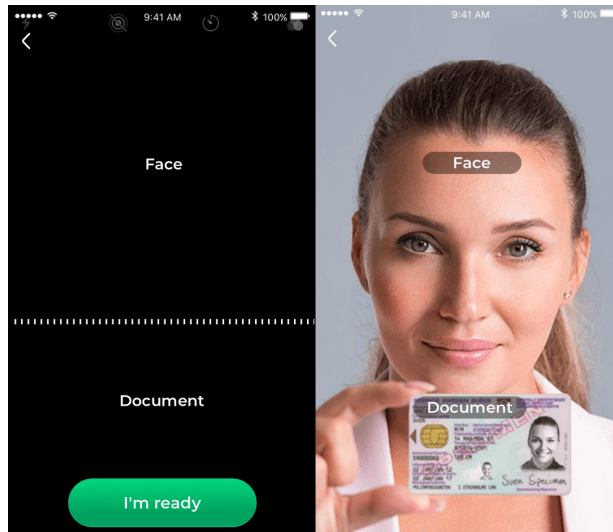

**The purpose of the liveness check is to quickly assess whether the person creating the Freja eID is the same person as the one with the ID document.** It will take place right before the user needs to take a picture of themselves.

*Info screen*

They will first get an info screen explaining the purpose and procedure of the liveness check. Similar to the ID photo, the user should be in a well-lit space so their face and ID document are clearly visible. The document should be held below the chin so their face is not obscured.

### *Mockup of how the liveness check should be done*

Once they tap 'Continue', they will be on the liveness check screen. Here, it is clearly shown how the liveness check should be performed. Once started, the liveness check takes only a few seconds and the user can proceed with registration.

---
