# FREJA eID RELEASE NOTES

---

These Release Notes describe all the changes made to Freja eID systems from the previous release. They include:

- Updates to the Freja eID mobile application from version 8.10 to 8.11 on both Android and iOS.

## Summary

- DIGITAL ID CARD SECURITY CODE

We have implemented a security feature in the user's digital ID card. When their QR code is scanned, a 3-digit code will appear that needs to match with the code that is shown to the person scanning them.

- COVID CERTIFICATE VALIDATION WITH FREJA

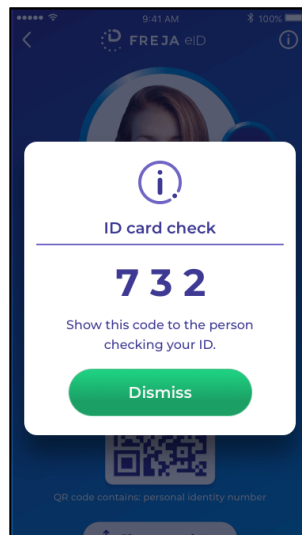

The QR code scanner in Freja has been updated and can now validate Covid Certificates for events.

## Digital ID Card Security Code

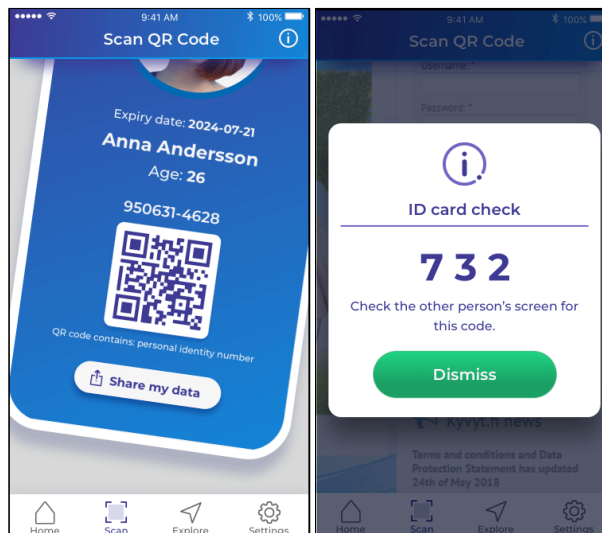

In this release we have implemented a security feature to the digital ID card in Freja. When the user's QR code is scanned by somebody else with the Freja app, both people will be shown a 3-digit code. This gives 2 possible outcomes:

1. The codes match meaning that the person's data and identity are valid
2. The codes don't match meaning that the person's data and identity are not valid and a high possibility of fraud

What the person who is identifying themselves sees:

What the person who is scanning their QR code sees:

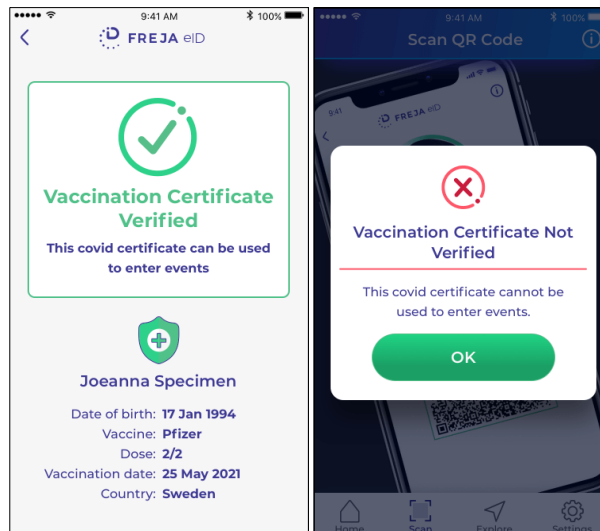

In the case above, the digits match and the user's identity is valid.

## Covid Certificate validation with Freja

Up until now it was possible to scan Covid Certificates with Freja, either to add them to the app or to view the data. As of this release, when you scan somebody's Covid Certificate, you will be able to see whether their vaccination data in particular is valid.

This primarily addresses the latest regulation of the Swedish government that requires that all public events, gatherings and activities of more than 100 people to use vaccination certificates.

When somebody's QR code is scanned it is now clear whether their vaccination data is valid:
