FREJA RELEASE NOTES

These Release Notes describe all the changes made to Freja systems from the previous release. They include:

- Updates to the Freja mobile application from version 10.5 to 11.0 on both Android and iOS.

Summary

- REGISTRATION TO FREJA+ WITH SWEDISH NATIONAL ID

We have made it possible for users to get Freja+ directly by using their Swedish National ID.

- UI IMPROVEMENTS – PROGRESS BAR IN FREJA

We have made improvements to the UI in the app. The progress bar has been moved down and is more prominent on the home screen.

Registration to Freja+ with Biometric Passport

In June we made it possible for people to get Freja+ directly by registering their Sweish **passport** in Freja without needing to visit one of our vetting agents.

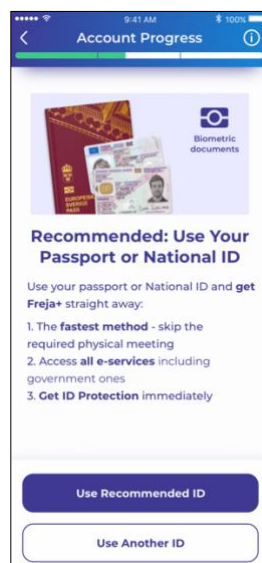

In this update, we are also making it possible for people using their Swedish National ID to get Freja+ immediately.

With this update the procedure is as follows:

- Using what we collectively call **biometric ID documents**, the Swedish passport and National ID, people will get Freja+ immediately without needing to visit one of our agents;
- With the other supported ID documents - driving licence and the Skatteverket ID card - the process remains the same; add the ID document to Freja, then visit an agent to get Freja+.

Procedure for passports and National IDs:

In the registration process, after the user has chosen their country, we will recommend that they use their biometric ID document. **The main benefit of this is that they will be able to get Freja+ from the comfort of their home – no in-person meeting required.**

Procedure for the other ID documents:

The procedure for the remaining supported ID documents - driving licence, Skatteverket identity card - remains the same.

Important note regarding the issuing of Freja+

Even though the method with biometric ID documents is considered more secure than the old one, we still need to perform background checks of the user during registration.

It may happen in a small number of cases that despite using their biometric ID document, the user might not get Freja+ and will still need to do the in-person security check at one of our agents.

UI Improvements – Progress Bar in Freja

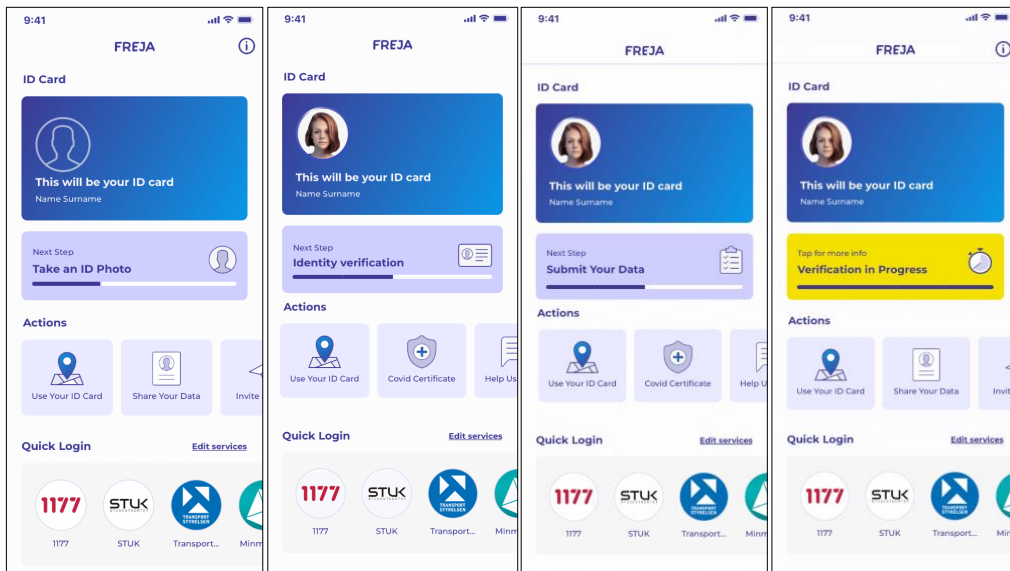

We have made UI improvements to the Freja mobile application by moving the progress bar from the header and incorporating it in the home screen UI.

The idea behind the progress bar is to help users along every step of the registration process and to help them understand what they need to do next to progress.

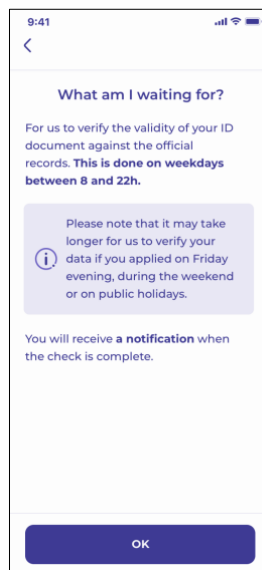

This change incorporates the visual aspect of a progress bar being filled, while occupying a more prominent position on the screen. There is also less clutter on the home screen with a cleaner header.

What a user at the Basic level will see:

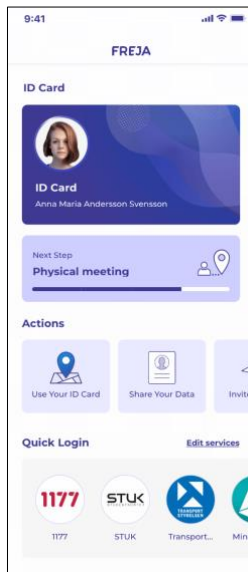

As the user progresses through the registration steps, the content will change accordingly telling them what do to next.

Once the data is submitted, the user can always tap on the yellow card to bring up more information about what is happening.

Similarly, if the user still needs to do the physical check for Freja+, the UI will reflect that, guiding them to find the agent to complete their upgrade.

Tapping the card here will open the flow for getting Freja+.

Onboarding screens:

We have also added onboarding screens whose purpose is to give the user a general overview of what is in store for them.
