FREJA eID RELEASE NOTES

These Release Notes describe all the changes made to the Freja eID systems from the previous release. They include:

- Updates to the Freja eID mobile application from version 6.3 to 6.4.

Summary

- Face Registration Improvements – We have further improved the face registration process. Previously, users had to do a security scan of their face and then take a photo of themselves. This update merges the steps into one, as the security scan is performed as the user is taking a photo of themselves..
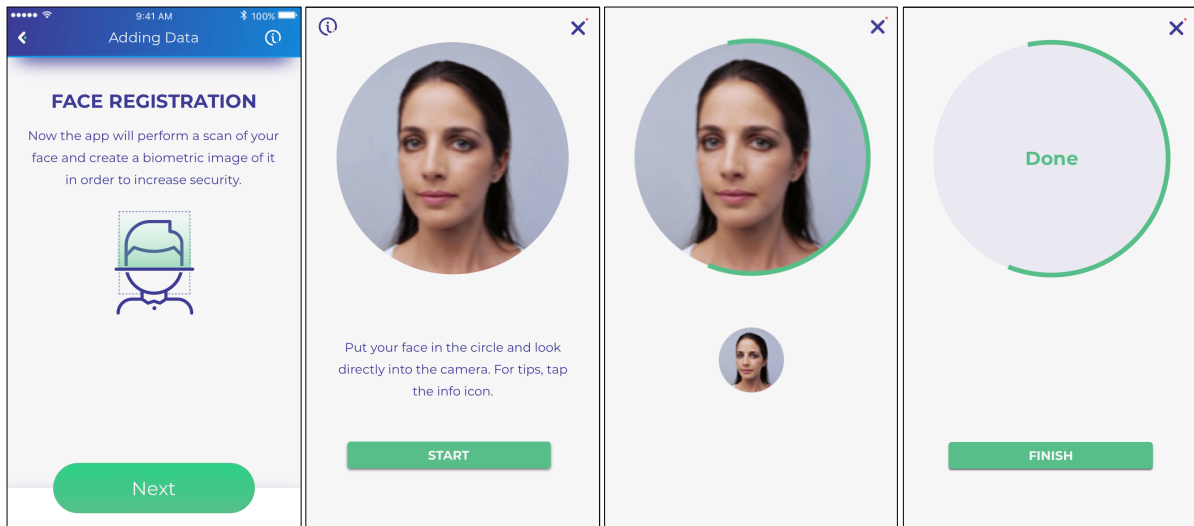

Face Registration Improvements

     This update brings improvements to the part of the flow that occurs after successfully registering their document details. After that, the next step in the process is performing a security scan of their face, and then taking a photo of themselves – the photo they will be able to see and share as part of their personal eID.
     These steps are now merged, as the security scan is now performed as the user is taking the photo of themselves. This means that the process of adding a document to Freja eID is faster and smoother. See below what the flow was like before, and what it looks like now:

Previous flow:

Step 1: Security scan

Step 2: Taking a photo of yourself

<u>New flow:</u>

Only 1 step in which the user takes a photo of themselves, while the security scan is performed in the background.

We have also improved the visual elements on the first screen to help users understand what kind of photo they should take. This in conjunction with the written instructions should make the flow much quicker and smoother.
